MAIL DATE

DELIVERY MODE

08/12/2008

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.		Applicant(s)	
	10/652,647		WHINNERY ET AL.	
	Examiner		Art Unit	
	John Cooney		1796	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 May 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 39-59 and 64-66 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 39-59 and 64-66 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 28 August 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1796

Applicant's arguments filed 5-28-08 have been fully considered but they are not persuasive.

Claim Objections

Claim 66 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 66 is dependent from a product claim made by the same process referred to by claim 39. This claim does not further limit the invention of claim 39.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 39-59 and 64-66 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claimed effect of "maintaining an average mechanical compressive strength of about 25 MPa" is not described in the originally filed supporting disclosure such that it is evident that applicants, at the time the application was filed, had possession of the invention now claimed. The values set

Art Unit: 1796

forth in Table 4 of applicants' supporting disclosure are not supportive of the now claimed range of values defined by the limitation "about 25 MPa". Neither the specific value of "25MPa" or the accompanying range of values defining, broadening term "about". Further, it is not evident that the basis of determination for the range of values claimed as being "an average mechanical compressive strength" is supported by the originally filed supporting disclosure. This is a new matter rejection.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 66 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 66 is confusing as to intent because it refers to claim 39 as if it is a process while it is in fact a product claim. While both claims are products made by the process of claim 39, with difference being only in how they are identified in their respective preambles, it can not be determined how the claims differ in the patentable sense and/or how claim 66 further defines claim 39.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 39-59, and 64-66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayash, Jr. et al.(3,673,128) in view of Fuzesi et al.(4,699,931) and Whinnery et al. TEPIC document (Whinnery et al.).

Hayash, Jr. et al. discloses preparations of oxazolidone-modified isocyanurate foams prepared by mixing and reacting polyisocyanates and epoxide resins in the presence of catalysts, surfactants, blowing agents inclusive of water and other propellants, and additives meeting fillers as defined by applicants' claims (see abstract, column 2 line 10- column 8 line 50, as well as, the entire document). Hayash, Jr. et al. discloses combination of the epoxy resins and polyisocyanates in amounts meeting the ranges of combinational values set forth by applicants' claims. Further, regarding the product-by-process recitations of applicants' claims, the resultant epoxy resin/polyisocyanate based foamed polymers of Hayash,Jr. et al. are of a formed structure having no apparent factually supported, non-obvious differences from the formed products of applicants' claims that burden is upon applicants' to demonstrate any unobvious differences in the product which may be evident based on the process recitations of the claims.

Art Unit: 1796

Hayash,Jr. et al. differs from applicants' claims in that combinations of tertiary amine catalysts inclusive of cyclic amines are not required or, specifically, blends of 2,4,6-tris(dimethylaminomethyl)phenol and N,N-dimethylcyclohexylamine and/or relative amounts values as claimed. However, Hayash,Jr. et al. (see column 7 lines 47 and 55) discloses employment of these compounds in the preparations of Hayash, Jr. et al. for the purpose of imparting their reaction catalyzing effects. Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the disclosed 2,4,6-tris(dimethylaminomethyl)phenol and N,N-dimethylcyclohexylamine catalyst of Hayash,Jr. et al. in combinations of varied respective individual contents within the teachings of Hayash,Jr. et al. for the purpose of imparting their disclosed reaction catalyzing effects in order to arrive at the products of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results. Additionally, regarding the blending of the tertiary amine with the cyclic amine, it has been held that is prima facie obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose. *In re Kerkhoven* 205 USPQ 1069. The idea for combining said compositions flows logically from their having been individually taught in the prior art. *In re Crockett* 126 USPQ 186, 188. Relatedly, the fact that a first component is in no way related to the second component, but where each has the same utility, does not detract from the obviousness of combining them. *In re Linder*, 457 F.2d 506, 507 (CCPA 1972). (Holding that it would have been obvious to

Art Unit: 1796

combine two known dispersants, since one skilled in the art would have expected a mixture of such dispersants to also be a dispersant).

Hayash, Jr. et al. differs from applicants' claims in that glycidyl ethers of Bisphenol A or F are not particularly required. However, Hayash, Jr. et al. indicates these materials to be acceptable members of one of the preferred groups of members used in the practice of their invention(see column 4 line 32-34 and column 6 lines 69-70). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed glycidyl ethers of Bisphenol A or F disclosed by Hayash,Jr. et al. in the making of the preparations of Hayash, Jr. et al. for the purpose of imparting their epoxy resin functional effect in order to arrive at the products of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results. It is prima facie obvious to substitute equivalents, motivated by the reasonable expectation that the respective species will behave in a comparable manner or give comparable results in comparable circumstances. *In re Ruff* 118 USPQ 343; *In re Jeze*l 158 USPQ 99; the express suggestion to substitute one equivalent for another need not be present to render the substitution obvious. *In re Font*, 213 USPQ 532. Additionally, though epichlorohydrin is not particularly recited to be the species used in the glycidylation of the polynuclear phenols of Hayash,Jr. et al. such is not seen to be a point of distinction as Hayash, Jr. et al. recites their materials to be glycidyl ethers and difference based on the formed epoxy resin is not seen or demonstrated in fact. Regardless, column 5 lines 3-5 of Hayash,Jr. et al. demonstrates epichlorohydrin to be a conventional means of converting non-fused phenols to glycidyl ethers. Accordingly, employment of this

Art Unit: 1796

species in the making of the Bisphenol glycidyl ethers of Hayash, Jr. et al. with the expectation of success in the absence of a showing of new or unexpected results.

Hayash, Jr. et al. further differs from applicants' claims in that particular fillers/additives as claimed are not particularly employed. However, Hayash, Jr. et al. does disclose the employment of additives in their preparations (column 8 lines 37-40), and Fuzesi et al. (see column 11 line 63 – column 12 line 2) and Whinnery et al. (pages 8-10) disclose the employment of various fillers inclusive of the inorganic and organic fillers, acrylonitrile copolymers, and glass microbeads of applicants' claims in the making of closely related foam preparations for the purpose of imparting their bulking and strengthening effects. Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the additive/filler materials of Fuzesi et al. and Whinnery et al. in the preparations of Hayash, Jr. et al. for the purpose of imparting their bulking and strengthening effects in order to arrive at the products of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

As to the strength properties now defined by applicants' claims it is held that such is a property associated with the compositional make-up and reaction parameters addressed in the rejection above. The combined prior art, including the Whinnery et al. document, provide for the modification of compositional effects in preparations of the instant concern, including administration of bulking and strengthening fillers to the reactive formulations, such that operation within the teachings of the combined

Art Unit: 1796

teachings of the cited prior art in order to arrive at the products claimed would have been within the skill of the ordinary practitioner in the art.

Applicants' arguments have been considered. However, rejection is maintained:

The following previous arguments are maintained:

Applicants' arguments have been considered, but rejection is maintained for the reasons set forth, again, above. The language of Hayash, Jr. et al. does not bar inclusion of additional catalysts from what is disclosed by the teaching of Hayash, Jr. et al., nor is Hayash, Jr. et al.'s full teaching limited by what is set forth in its claims. Additionally, the secondary references are not looked to for their teaching of this embodiment of applicants' invention, and, therefore, arguments as to the lacking of these elements in their disclosure is of little weight.

Examiner maintains the position combining the individual catalysts disclosed by Hayash, Jr. et al. to form a blended third catalyst which is then used within the preparations of Hayash, Jr. et al. to be properly set forth. That the formed third catalysts would then be used in the further work-up of the compositions of Hayash, Jr. et al. does not negate the position held by examiner. As indicated in examiner's rejection, the two catalysts are taught to be useable, are assumed to function properly, and a catalyst formed by a blend of these two functional catalyst would also be expected to be functional.

Applicants' statements at page 19 of their reply as to the function of their catalyst blends are not supported, in fact, by a factually supported showing of new or unexpected results which are commensurate in scope with the scope of the claims as they currently stand.

When considering showings of results, the following must be considered:

Result Must Compare to Closest Prior Art:

Where a definite comparative standard may be used, the comparison must relate to the prior art embodiment relied upon and not other prior art – *Blanchard v. Ooms*, 68 USPQ 314 – and must be with a disclosure identical (not similar) with that of said embodiment: *In re Tatincloux*, 108 USPQ 125.

Results Must be Unexpected:

Unexpected properties must be more significant than expected properties to rebut a prima facie case of obviousness. *In re Nolan* 193 USPQ 641 CCPA 1977.

Obviousness does not require absolute predictability. *In re Miegel* 159 USPQ 716.

Art Unit: 1796

Since unexpected results are by definition unpredictable, evidence presented in comparative showings must be clear and convincing. *In re Lohr* 137 USPQ 548.

In determining patentability, the weight of the actual evidence of unobviousness presented must be balanced against the weight of obviousness of record. *In re Chupp*, 2 USPQ 2d 1437; *In re Murch* 175 USPQ 89; *In re Beattie*, 24 USPQ 2d 1040.

Claims Must be Commensurate With Showings:

Evidence of superiority must pertain to the full extent of the subject matter being claimed. *In re Ackerman*, 170 USPQ 340; *In re Chupp*, 2 USPQ 2d 1437; *In re Murch* 175 USPQ 89; *Ex Parte A*, 17 USPQ 2d 1719; accordingly, it has been held that to overcome a reasonable case of prima facie obviousness a given claim must be commensurate in scope with any showing of unexpected results. *In re Greenfield*, 197 USPQ 227. Further, a limited showing of criticality is insufficient to support a broadly claimed range. *In re Lemin*, 161 USPQ 288. See also *In re Kulling*, 14 USPQ 2d 1056.

Applicants' assertions at page 19 of their reply and their submitted affidavit evidence fail to overcome the instantly held rejection in that they lack the necessary showing of new or unexpected results necessary to overcome the position of obviousness currently held. Applicants' have not persuasively demonstrated unexpected results based on the catalysts combinations of their claims in a manner which is commensurate in scope with the scope of their claims. Comparisons have not been made with the prior art embodiment relied upon. Applicants have not demonstrated their results to be clearly and convincingly unexpected and more than mere optimizations of the knowledge in the art or more significant than being secondary in nature.

Applicants' arguments concerning their process claims, including those at page 20 of their reply, have been considered. However, the differences noted have not been associated with features of the processes claimed, and these recitations in the claims do not substitute for fact based showings of new or unexpected results which are demonstrated to be commensurate in scope with the scope of the instant claims.

Applicants' latest arguments have been considered. However, rejection is maintained as proper for all of the reasons set forth above. Claims are not limited to the exclusion of blowing agent, distinction based on any exclusion of blowing agent is not seen, and applicants even have claims (see claim 17) which disclose water, a known blowing agent. It is maintained that applicants have not established non-obvious differences based on the process by which the products are formed, and the evidence of record is clear that the compositions of the prior art are curable at temperatures above about 60 degrees Celsius. Combination of the teachings of the prior art in the manner set forth in the rejection above in order to arrive the dual, or greater, amine catalyst system of applicants' claims is maintained to be properly established and has not been rebutted by the evidence of record.

Art Unit: 1796

Applicants' affidavit evidence is noted. However, its relevance to limitations provided for by the claims is not seen nor has it been shown.

It is maintained that the rejection is proper for the reasons set forth above is evident.

As indicated in the rejection above, it is held and maintained that arrival at the products of applicants' claims from the combined teachings of the prior art, including the Whinnery et al. document which provides for inclusion of bulking and strengthening fillers and formation of articles of the strengths now claimed, would have been within the purview of the ordinary practitioner in the art.

It is maintained that the principles of law applied in the rejection above have not been misapplied. The prior art provides for the use of the instantly claimed catalysts for their recognized catalytic function, and the combination of these known catalyst to form a catalyst new catalyst composition useful for the same purpose of providing catalytic function would have been obvious. That the teaching and the instant claims go on to employ these catalyst in reactive formulations does not negate these holdings of obviousness.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1796

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Cooney whose telephone number is 571-272-1070. The examiner can normally be reached on M-F from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
